### DETAILED ACTION

1. Claims 1-17 have been examined.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 11-13 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by ADELMAN et al (US 6,006,259).

Claims 1-2 and 12-13, ADELMAN et al discloses a telecommunication platform and method comprising: a cluster of processors (401 of figure 4) which collectively perform processing function, plural processors (403, 405, 407, 409 of figure 4) of the cluster (401) have Internet Protocol (IP) capabilities and respective plural IP interfaces; a Internet Protocol (IP) handler distributed throughout the cluster which facilitates applications executing on the plural processors comprising the cluster to be addressed using a same media access layer (MAC) address (column 10, line 1-5).

Claims 11 and 17, ADELMAN et al further teach the apparatus of claim 1, whereby the plural processors have a same IP address, the Internet Protocol (IP) handler forwarding IP frames received from outside the platform on any of the plural IP interfaces and addressed to the same IP address to a correct one of the plural processors executing an IP software application (column 2, line 63-67).

***Allowable Subject Matter***

4. Claims 3-10 and 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: the prior art made of record does not teach or fairly suggest in combination wherein the platform comprises an IP stack, wherein the Internet Protocol (IP) handler comprises a media access control (MAC) bridge; and wherein the MAC bridge comprises: a first bridge port connected by an Ethernet link interface to the IP stack; a second bridge port provided by a first processor of the cluster; a third bridge port provided by a second processor of the cluster; a MAC bridge communications system connecting the first bridge port, the second bridge port, and the third bridge port to each other.
